DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to managing television network bandwidth by halting transmission of a program if the channel is not tuned by any receiver, classified in class 725, subclass 116.
- II. Claims 9-16, drawn to managing network bandwidth by reestablishing broadcast of a program if the channel has been reallocated as a data service channel, classified in class 725, subclass 126.
- III. Claims 17-33, drawn to managing network bandwidth by broadcasting a program at a reduced data rate if the channel is not tuned by any receiver, classified in class 370, subclass 252.
- IV. Claims 34-40, drawn to a programmable television receiving unit coupled to network, classified in class 725, subclass 132.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable.

In the instant case, invention I has separate utility such as halting transmission of a program and broadcasting information such as a data service (ex. news services) other than a program on the channel.

In the instant case, invention II has separate utility such as reestablishing broadcast of a program on the channel, such that the user is provided with content which is designated for the particular channel.

In the instant case, invention III has separate utility such as broadcasting a program on the channel at a reduced data rate by displaying the image at a slower frame rate than full data rate presentations such that assignment of data services may comprise allocating packets in an MPEG stream to data services such as Internet services.

In the instant case, invention IV has separate utility such as a receiver for transmitting an upstream message to such that the receivers are polled to inform the headend when the user selects a new channel, and when the user turns on/off the receiver so that the head end knows how many receivers are tuned to a particular channel. If no receivers are tuned to a particular channel the headend will send reallocate the bandwidth of that channel to a data service such as the internet.

See MPEP § 806.05(d).

2. A telephone call was made to Scott Doyle on 1/12/06 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Conclusion
